

TechBench is a professional social platform targeted at IT industry

TechBench hosts a professional social network that highlights work achievements and provides space to showcase projects. Platform intends to become a respected resource recognized in the IT community.

Platform includes versatile parts that provide services the best way. Many different solutions are united in one ecosystem.

Platform combines the best of social media, crowd-based development, freelance employment, B2B recruitment solution and interactive crowdfunding. Users of the platform will be able to interact, exchange ideas, and work together to create technical foundations for startups.

Social network for specialists

TechBench is a professional social platform targeted at IT specialists and businesses, which offers its users ability to cooperate together on their own projects and startups.

TechBench social network will aim to become the starting point on the Internet for IT specialists who want to create professional social profile.

Social network for IT-professionals can lead to an unlimited amount of opportunity to blend talents and ideas into meaningful projects. The framework for connections here is based on mutual professional interests.

Capacities of each member's profile will be fully developed in order to allow each participant to fully show off their skills and shine, like an online portfolio, business card and presentation in one.

Combining the best features of sites like Behancem LinkedIn and Dribbble, but with a focus on IT professionals, it is an essential place for skilled technologists to come together and a mark of achievement and competence.

Social network will also include **extensive communication capacities**, including private messaging, group chats for projects or business, voice calls and multi-party video conference calls, bringing in the most beloved features of everyday social networks to a **professional space oriented to tech high achievers**.

Revolutionary freelance portal

TechBench is **designed to completely change the way the freelance market works today**. Instead of all of the users competing against one another for jobs, they will be able to come together to improve code and even develop their own start-ups and ideas.

This new model is a ground breaking approach for promoting start-ups and creating early bird investment opportunities.

Collaboration freelance portal is based on the social network. Investors crowdfund developers projects through smart contracts. This innovative model will allow developers to be independent, work for themselves or find colleagues, search and create projects more efficiently.

Startups marketplace

The opportunity to participate and invest in high-profit start-ups should become accessible to a **wide audience**. Crowdfunding is the basis for some of the most exciting and innovative products.

IT specialists will be able to create new startups, work with other specialists on existing ones, receive funding from investors.

Startup investors will be able to find the most promising startups, fund them and acquire ownership on their shares.

Deep screening employment solution for businesses on the base of TechBench social network

TechBench employment service is specially designed to optimize the interaction of employers, job seekers and HR specialists. B2B recruitment solution will provide businesses pre-screened listing of qualified candidates that look for a job and are ready to be hired.

Platform will give access for small and mediumsized (SMB) IT-business to the base of qualified IT specialists, formed using neuronet and deep algorithms for screening and testing staff.

Because TechBench's social network is fully integrated with freelance portal, professionals will be able to show their qualifications, achievements, areas of current interest and even showcase their successful work on start-ups on the platform. HR specialists will be seamlessly able to make new job connections and start contracts directly with the best candidates.

Deep candidate screening services are becoming more popular among business customers, especially in IT and technology-related areas, but all existing recruitment services for business customers do not have their own employee base.

Smart contracts, e-sign documents—to protect platform users

Smart contracts protect and distribute user funds in the cryptocurrency. However, they do not protect users legally.

Along with smart contracts, the platform users confirm all their relationships legally by signing electronic documents. Electronic signatures are used to confirm actions and conclude agreements instantly.

Legal obligations under this type of agreements are recognized practically throughout the world. The system will integrate e-sign—the possibility of signing documents at a distance.

A smart contract is launched only after the procedure for signing an electronic contract. Thanks to this policy, every transaction on the platform will be documented and legally valid.

Blockchain technology to keep deal history forever

Ethereum network blockchain is used in conjunction with smart contracts. Blockchain will allow to secure and protect the interests of the users of the platform, since this type of database is not subject to editing and is best suited for storing the history of contractual relationships.

ICO Advantages

Tokens Holders get access to the platform's functionality. Holders also receive bonus tokens as revenue.

TECH tokens are designed to offer revenue, but in the same time not to be considered as security tokens. Tokens are valuable and will be tradable on exchanges.

Token Distribution
